ClinicOS

ClinicOS — Investor Pitch

The Operating System for India's 1.3 Million Specialty Clinics

The Opportunity

India has **1.3 million registered clinics** — dermatology, dental, physiotherapy, ophthalmology, ENT, gynaecology, orthopaedics — and 93% of them run on paper registers, WhatsApp groups, and Excel sheets.

The Indian healthcare IT market is **$3.4 billion today and growing at 22% CAGR**. Yet no dominant EMR player has cracked the specialty clinic segment at scale. The existing solutions are either:
- Built for hospitals (too complex, too expensive)
- Built for general practice (no specialty depth)
- Built for Western markets (no GST, no ABDM, no Indian drug database)

This is a $600M+ revenue opportunity that is essentially uncontested.

The Problem

A dermatologist in Pune spends:
- 45 min/day writing paper prescriptions
- 30 min/day chasing appointment confirmations on WhatsApp
- 20 min/day tracking payments manually
- 15 min/day looking up drug names

That's **2 hours of clinical time wasted every day** — time that could be seeing 4–6 more patients.

At ₹500 average consultation fee × 5 extra consultations × 250 working days = **₹6.25 lakh additional revenue per doctor per year** that ClinicOS enables.

The Solution

ClinicOS is a multi-tenant SaaS EMR platform built exclusively for Indian specialty clinics.

Built on 3 core principles:
1. **Specialty-first** — purpose-built templates for each specialty, not generic forms
2. **India-first** — ABDM/ABHA compliant, GST invoicing, Indian drug database, Razorpay payments, WhatsApp automation
3. **Automation-first** — WhatsApp reminders, AI dictation, automatic payment reconciliation

Product Depth (What We've Built)

7 Complete Specialty EMR Templates

SPECIALTY	UNIQUE FEATURES
Dermatology	Body diagram, lesion mapping, PASI/IGA/DLQI scales, before/after photos
Dental	32-tooth FDI chart, periodontal charting, lab work orders

SPECIALTY	UNIQUE FEATURES
Ophthalmology	VA/IOP/refraction/slit-lamp/fundus, spectacle & contact lens PDFs
Physiotherapy	ROM/MMT/VAS + FIM/Barthel/WOMAC outcome measures, HEP generator
Orthopaedics	Joint exam, fracture classification (AO), implant records
ENT	Audiogram, tympanogram, DHI vertigo scale
Gynaecology	Obstetric history, antenatal tracking, menstrual cycle

Core Platform

- Multi-tenant architecture (1 platform serves unlimited clinics)
- Role-based access (Owner, Doctor, Receptionist, Nurse, Staff)
- WhatsApp automation (8 trigger events, Meta Cloud API)
- Digital prescription with drug interaction checking
- GST-compliant billing and Razorpay payment collection
- Photo vault with before/after comparison and encrypted storage
- ABDM M1 (ABHA creation/linking), M2 (HIP/FHIR), M3 (HIU) integration
- AI voice dictation (Whisper) + field mapping (Claude API)
- Custom EMR builder (no-code template creation)
- Multi-location support (clinic chains and franchise groups)
- Insurance/TPA claim management
- Lab integration (Dr. Lal, SRL, Thyrocare, Metropolis, Pathkind)
- Public online booking (`clinicname.clinic0s.com`)
- Super admin panel with subscription management

Business Model

SaaS Subscription (Primary Revenue)

TIER	TARGET	MONTHLY ARR/CLINIC
Solo	Single doctors	₹999 (~$12)
Small	2–5 doctor clinics	₹1,999 (~$24)
Group	Chains, 5–15 doctors	₹3,999 (~$48)
Enterprise	Hospitals, large groups	₹7,999 (~$96)

Blended ARPU target: ₹1,800/month

Additional Revenue Streams

- **Transaction fees** — 0.5–1% on Razorpay payments processed through ClinicOS
- **WhatsApp credits** — usage-based for high-volume messaging

- **Lab referral commissions** — ₹50–200 per lab order placed through platform
- **ABDM compliance module** — enterprise add-on
- **AI dictation credits** — per-minute Whisper transcription

Market Sizing

SEGMENT	CLINICS	ADDRESSABLE
Dermatology	180,000	High — specialty-specific tools
Dental	320,000	High — FDI chart is a must-have
Physiotherapy	140,000	High — outcome measure requirements
Ophthalmology	95,000	High — refraction/spectacle workflow
ENT	85,000	Medium
Gynaecology	120,000	Medium
Orthopaedics	100,000	Medium
Total TAM	**~1.3M**	

Capturing 1% of TAM (13,000 clinics) at ₹1,800 ARPU = **₹28 crore ARR**
Capturing 5% of TAM (65,000 clinics) at ₹1,800 ARPU = **₹140 crore ARR**

Go-To-Market Strategy

Phase 1 — Dermatology Beachhead (Months 1–12)

- India has 12,000 practicing dermatologists, highly concentrated in metros
- ClinicOS has the deepest dermatology EMR of any Indian product
- Target through: Indian Association of Dermatologists (IADVL), dermat conferences, Instagram/YouTube ads targeting clinic owners
- Goal: 500 paying clinics

Phase 2 — Dental & Ophthalmology Expansion (Months 6–18)

- Dental and ophthalmology are the next highest-density specialties
- Partnership with dental college alumni networks and IOS (Indian Ophthalmology Society)
- Goal: 2,000 paying clinics

Phase 3 — Clinic Chain Segment (Months 12–24)

- Group/Enterprise plan targeting chains like Dr. Batra's, Vision Express, Fortis outpatient
- Significantly higher ARPU (₹10,000–50,000/month per chain)
- Goal: 50 enterprise accounts + 5,000 SMB clinics

Distribution Channels

- **Direct / self-serve** — online signup, 14-day trial, credit card
- **Medical reps / channel partners** — commission-based sales in Tier 2/3 cities
- **Medical associations** — bulk licensing deals with IADVL, IDA, etc.
- **Hostinger/cloud resellers** — bundled with hosting for new clinics

Competitive Landscape

COMPETITOR	WEAKNESS VS. CLINICOS
Practo	Appointment booking only — no deep EMR, no specialty templates
Dr. Vaidya / eVitalRx	Pharmacy-focused, not clinic EMR
Marg ERP	Desktop billing software, not cloud EMR
Healthplix	General practice focus, limited specialty depth
DrChrono / Epic	US-built, no ABDM, no GST, no Indian drug database
HealthDesk	Limited automation, no WhatsApp, no specialty templates

ClinicOS moat: ABDM compliance + WhatsApp automation + specialty depth + Indian drug database + Razorpay integration — all in one platform that took 18+ months to build.

Technology

Stack: Laravel 11 / PHP 8.2 (backend API), React 18 + TypeScript (web), Flutter (mobile), MySQL 8.0

Architecture:
- Multi-tenant with clinic_id row-level isolation
- FHIR R4 compliant health record sharing
- OpenAPI 3.1 documented REST API
- Horizontal scaling ready (AWS-native deployment)
- Audit logging for every clinical action

AI Layer:
- OpenAI Whisper — voice-to-EMR transcription (Hindi + English)
- Claude API — intelligent field mapping and prescription suggestions

Traction & Milestones

MILESTONE	STATUS
Full product architecture designed	Complete
All 7 specialty EMR templates built	Complete
WhatsApp automation (8 triggers) live	Complete

MILESTONE	STATUS
ABDM M1 (ABHA creation) complete	Complete
GST billing + Razorpay integration	Complete
Public booking + payment at booking	Complete
Insurance/TPA module scaffolded	Complete
Lab integration (5 providers) scaffolded	Complete
AI dictation wired (Whisper + Claude)	Complete
Multi-location / clinic chains	Complete
Beta testing with clinics	In progress
ABDM M2 production certification	In progress

Financial Projections

YEAR	CLINICS	ARPU/MO	ARR
Year 1	500	₹1,200	₹72 L
Year 2	3,000	₹1,600	₹5.76 Cr
Year 3	12,000	₹2,000	₹28.8 Cr
Year 4	35,000	₹2,200	₹92.4 Cr
Year 5	80,000	₹2,500	₹240 Cr

Gross margin target: 75–80% (SaaS infrastructure costs + WhatsApp API costs)
CAC target: ₹8,000–15,000 (12–18 month payback at ₹1,200 ARPU)

The Ask

Raising: ₹3 Crore (Seed Round)

USE OF FUNDS	AMOUNT	PURPOSE
Engineering (4 engineers × 12 months)	₹1.2 Cr	ABDM M2 cert, AI features, mobile app
Sales & Marketing	₹0.8 Cr	Dermatology conference circuit, digital ads
ABDM Certification & Compliance	₹0.3 Cr	NHA sandbox → production
Drug Database License (CIMS)	₹0.2 Cr	₹1.8L/year full Indian drug DB

USE OF FUNDS	AMOUNT	PURPOSE
Infrastructure & Ops	₹0.3 Cr	AWS, WhatsApp Business API setup
Working Capital	₹0.2 Cr	

Target: 3,000 paying clinics, ₹5.76 Cr ARR by end of Year 2

Why Now?

1. **ABDM mandate** — Government of India's Digital Health Mission requires all clinics to support ABHA by 2025. Compliance creates a forcing function for clinic software adoption.
2. **WhatsApp Business API maturity** — Meta opened the Cloud API in India in 2022. The unit economics for automated patient communication now work at scale.
3. **Post-COVID digitization** — 68% of Indian clinic owners surveyed in 2024 say they plan to adopt clinic management software in the next 12 months (FICCI Healthcare Report 2024).
4. **AI tailwind** — Voice-to-EMR eliminates the last major friction in EMR adoption for older doctors. Hindi-English dictation makes it viable for Tier 2/3 markets.

Team

Sagar Bijja — Founder & CEO, ClinicOS
Healthcare technology and product leadership; building ClinicOS for Indian specialty clinics.

Advisors — Medical professionals across dermatology, dental, ophthalmology, and related specialties (to be named as formal advisory board is expanded).
